

Temporary Handwash Station

The handwashing station must consist of a 5-gallon thermal (insulated) container with a spigot that provides a continuous flow of warm (100°F- 120°F) running water, soap, paper towels and a 5-gallon bucket to collect the dirty water. Any Temporary Food Establishment found without adequate hand washing facilities will be closed or required to stop selling or giving away food samples until the violations are corrected.

Any large retail chain store sells the 5-gallon insulated container and the spigots are easily changed out with the continuous flow version from any hardware store.
